No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Corynebacterium glutamicum lysozyme insensitivity protein. This protein renders lysozyme-sensitive strains of Corynebacterium glutamicum insensitive to lysozyme. DNA sequences encoding the lysozyme insensitivity protein can be used to construct a recombinant vector for the expression of this protein in a host cell. The DNA encoding the lysozyme lysozyme lysozyme lisensitivity protein can also be mutated, and used to generate strains of Corynebacterium glutamicum in which this protein is also discount and used to generate strains of corynebacterium glutamicum in which this protein is laced for the production of amino acids, in particular glutamic acid and glutamine.
                                                                                               olecule useful for production of amino acids encodes prote lysozyme resistance to Corynebacterium glutamicum strain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents DNA encoding a Corynebacterium glutamicum lysozyme insensitivity protein. This protein renders lysozyme-sensitive strains of Corynebacterium glutamicum insensitive to lysozyme. DNA sequences encoding the lysozyme insensitivity protein can be used to construct a recombinant vector for the expression of this protein in a host cell. The DNA encoding the lysozyme insensitivity protein and so be mutated, and used to generate strains of Corynebacterium glutamicum i which this protein is inactivated and which are therefore lysozyme-sensitive. Corynebacterium glutamicum is used for the production of amin

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence date for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                             polynucleotides derived from Coryneform bacteria, for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene

Disclosure; SEQ ID NO: 7066; 246pp + Sequence Listing; English

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium coryneform bacterium and identifying a minologue of a gene derived from coryneform bacterium. Coryneform bacterium and identifying amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described

AAF71753 to AAF72330 encode the Corynebacterium glutamicum metabolic pathway (MP) proteins given in AAB79634 to AAB80211. The C. glutamicum MP nucleic acids are useful for the production of fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, puthe and pyrimidine bases, unclosedades, nucleosides, successible staturated and unsaturated fatty acids, diols, carbohydrates, ilpids, compounds, vitamins, cofactors, polyketides and enzymes.
                                                                                                                                                            Nucleic acids from Corynebacterium glutamicum encoding metabolic pathway proteins, useful for producing fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, and purine and pyrimidine bases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

                                                                                    The present sequence is the total DNA sequence from cosmid clones LP(2)127 and LP(2)128, which contains a Streptomyces aureofaciens ATCC 13899) DNA that encodes the proteins of the entire chlortetracycline blosynthetic pathway. The blosynthetic gene, which can be expressed in heterologous hosts, especially S. lividans, may be useful in the production of antibiotics.

The invention relates to combination of two plasmids for cloning the genes encoding the biosynthetic production pathways of chlortetracycline, tetracycline, or their derivatives. One plasmid contains an origin of replication, an actinomycete (such as Streptomyces lividans, S. ariseofuscus, or S. ambofaciens) active antibiotic resistance gene and three or more tandem cohesive end sites. The second plasmid contains an actinomycete active origin of replication and three or more tandem cohesive end sites. The invention can be used to clone a large amount of genetic material for the heterologous production of the antibiotics, chlortetracycline, tetracycline and their analogues. A cluster of genes can be inserted into the plasmid allowing a biosynthetic pathway to be transferred in its entirety to a heterologous host. The invention specifically relates to cloning of the entire tetracycline and chlortetracycline from Streptomyces aureofaciens and its expression in a heterologous host such as S. lividans. The present sequence represents a characterial but a sequence from the cosmid clones designated LP2-127

This "bacterial signalling" is called "duorum sensing allows a bacterial species to sense its own number and regulate gene expression according to population density. The present sequence is an open reading frame (ORF) of a Pseudomonas aeruginosa quorum sensing controlled gene. Inhibitors of quorum sensing signalling renders a bacterial population more susceptible to treatment. The present invention relates to a method for identifying modulators of quorum sensing signalling in Pseudomonas aeruginosa bacteria. Modulators of quorum signalling in pseudomonas aeruginosa bacteria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               aeruginosa infections. P. aeruginosa is an opportunistic pathogen of immunocompromised individuals (burn patients, cystic fibrosis patients, patients undergoing immunosuppressive therapy and patients with AIDS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                390

The present invention relates to the genomic sequence of Pyrococcus abyssi and P. abyssi proteins (see AAB96053-AAB96842). P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is a fragment of the genomic sequence of P. abyssi. The 5' end of this sequence overlaps with the 3' end of AAH41224 and the 3' end of this sequence overlaps with the 5' end of AAH41226 proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Db 209411 ATTCGCCATCGTGGACCTGATGATGAGGGAGTTTATGTTGATGATAATGTTAGCCTTGGT 209352
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              82 atgcgccaccgtggtcctgacgatgccggcacttggcatgacgccgatgcagcgtttgga 141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: This patent is in the same patent family as WO200065062, which contains additional sequences as shown in AAB99132-AAB99143,

```

The present sequence represents the BLM (Bleomycin) gene cluster, containing open reading frames (ORFs) 8 130. The proteins encoded by the gene cluster are useful for producing peptides and/or poolyketide metabolites, especially bleomycin or bleomycin analogues. They are also useful for chemically modifying biological molecules to produce branched methyl groups, and for coupling amino acids and fatty acids. They may be reacted with an apo-carrier protein and coerayme A to produce a holo-carrier protein. The BLM gene cluster or catalytic domains can be used individually or collectively to produce thiazolidine, thiazoline, bithiazoline and bithiazoline-containing microbial metabolites. The BLM gene cluster may also be used to produce

Novel isolated nucleic acids comprising sequences encoding peptides useful for treating or diagnosing e.g. cancer \,^{\circ}
                                                                                                                                     the present invention.
```

AAC77607 to AAC7848 encode the human cancer associated proteins given in AAB43398 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities antidabetic; antidate; thrombolytic; coagulant; dermatological; neuroprotective; cardiant; thrombolytic; coagulant; coortropic; vasotropic; antipsoriatic and antidaping pathological conditions. polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Colynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoletic cells, autoimmune disorders, allergic reactions; graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate haemostatic or thrombolytic activity, modulate baction, and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB42240 represent sequences used in the exemplification of Sequence 1470 BP; 336 A; 380 C; 470 G; 277 T; 7 other; Claim 1; Page 970; 2352pp; English.

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity

P-PSDB; ABG00754

Claim 1; SEQ ID No 745; 103pp; English.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerse chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in

proteins or their active domains. The polypeptides, polynuclectides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynuclectides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense based to production of recombinant proteins, and in generating anti-sense based to carget drugs to a tumour, in assays to determine bloojscal activity, to raise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Colypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating burns, promoting the proliferation, differentiation on an aurvival of stem cellis, as a contraceptive, treating osteoporosis and osteoarthitis, aneamla, althouraceptive, treating osteoporosis and osteoarthitis, aneamla, anti-inflammatory diseases, eczema, heamophila, thrombosis, and infection.

The proliferation or from autoimmunity, cancer, allergy, asthma, anti-inflammatory diseases, eczema, heamophila, thrombosis, and infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, novel protein; ss; Antianaemic; osteopathic; antiinflammatory; immunomodulatory; cytostatic; neuroprotective; vulnerary; nootropic; anticonvulsant; antiarthritic; cerebroprotective; antifungal; antiviral; antibocterial; antiallergic; dermatological; haemostatic; antiathantic; thrombolytic; immunogen; antibody; gene therapy; neurological disorder;

                                                 g
                                                                                                                                                           proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the polypeptides. Polynucleotides of the invention can be used to production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to target antibodies/eliott an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating burns, promoting the proliferation, differentiation and survival of stem cells, as a contracting osteoporosis and osteoarthritis, anaemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Alzheimer's, Parkinson's and Huntington's diseases, amylotrophic lateral sclerosis, stroke, immune deficiencies resulting from bacterial, viral or fungal infection or from autoimmunity, cancer, allergy, asthma, graft-versus-host disease, eczema, haemophilia, thrombosis, anti-inflammatory diseases, nervous system disorders, and infection.
Parkinson's disease; inflammatory disorder; cancer; asthma; osteoporosis; tissue regeneration; immune disorder.

Fatent No. 5589385
GENERAL INFORMATION:
APPLICANT: Ryan, Michael J.
APPLICANT: Lotvin, Jason A.
APPLICANT: Etrathy, Nancy
APPLICANT: Etrathy, Nancy
APPLICANT: Cloning of the biosynthetic pathway for
ITILE OF INVENTION: Cloning of the biosynthetic pathway for
TITLE OF INVENTION: Chorietracycline and tetracyline Formation and cosmids
ITILE OF INVENTION: useful therein
NUMBER OF SEQUENCES: 1
CORRESPONDENCE ADDRESS:
ADDRESSEE: American Cyanamid Company
STREET: One Cyanamid Plaza

1 (bases 1 to 635)
Jenkins, C., Kedar, V. and Fuerst, J.A.
Gene discovery from sequence tags generated using genomic DNA
11braries constructed from representatives of the planctomycete
division of the Domain Bacteria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Contact: Fuerst JA

This protein renders lysozyme-sensitive strains of Corynebacterium glutamicum insensitive to lysozyme. DNA sequences encoding the lysozyme insensitivity protein can be used to construct a recombinant vector for the expression of this protein in a host cell. The DNA encoding the lysozyme insensitivity protein can also be mutated, and used to generate strains of Corynebacterium glutamicum in which this protein is inactivated and which are therefore lysozyme-sensitive. Corynebacterium glutamicum is used for the production of amino acids, in particular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  267
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents DNA encoding a Corynebacterium glutamicum lysozyme insensitivity protein. This protein renders lysozyme sensitive strains of Corynebacterium glutamicum insensitive to lysozyme. DNA sequences encoding the lysozyme insensitivity protein can be used to construct a recombinant vector for the expression of this protein in a host cell. The DNA encoding the lysozyme insensitivity protein can also be mutated, and used to generate strains of Corynebacterium glutamicum in which this protein is inactivated and which are therefore lysozyme sensitive. Corynebacterium glutamicum is used for the production of amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA encoding Corynebacterium glutamicum lysozyme insensitivity protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New DNA molecule useful for production of amino acids encodes protein imparting lysozyme resistance to Corynebacterium glutamicum strain -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Lysozyme insensitivity protein; bacterium; recombinant expression; amino acid production; ds.
